

# cleanaer™

## The welcoming scent of home

### Your home is your sanctuary

We can spend a fortune on air fresheners, air purifiers, fragranced candles, oils and plug-ins. But making the air smell nice doesn't always hide the underlying problems.

### Bad-odour culprits

- Lingering cooking smells
- Stuffy rooms with stale air
- Pet odours from wet dogs, cat litter boxes etc.
- Stale cigarette smoke

### All-in-1 indoor air freshness

There is an all-in-1 indoor air freshness solution that works 24 hours a day, 7 days a week; a solution that makes a huge difference in air quality, but that is so small and silent you barely know it is there.

It's called Cleanaer™.

### What is Cleanaer?

Cleanaer is an air purifier with multiple applications. Using the technology of electrostatics it provides a long-term solution for odour removal and air freshening, improving indoor air quality and helping people breathe more easily.

Cleanaer works by gently releasing microscopic particles called Liquid-ions. They float around on the air currents, attracting airborne particulates and removing them from the air. It actually improves indoor air quality, making the air feel fresh and clean.

### Cleanaer products:

- Are safe, trusted and endorsed by the British Allergy Foundation
- Work 24 hours a day, 7 days a week
- Are small (only 24cm high), discreet, completely silent
- Inexpensive to use
- Do not release ozone
- Do not use propellants or aerosols
- Battery-operated

### Why choose Cleanaer?

Some products claim to eliminate smells but their effect is not always long-lasting, they can release harmful aerosols or ozone, and can leave a sticky residue on your surfaces. Cleanaer is different:

- No risk of messy spills from heated oils, candles or gels
- The subtle, continuously released fragrances are not overwhelming
- Available in a fragrance free variety which still helps remove odours and helps allergy sufferers!
- No fire risk from unattended candles
- No burning smell from extinguished candles
- Long-lasting solution helps eliminate odours before they get a chance to linger
- Does not leave aerosol residue on surfaces
- Does not spray noisily and unexpectedly
- Does not lose the scent before it runs out.
